# The eLearning Africa Virtual Exchanges bring you a new opportunity to network and engage!

“These are some incredible and relevant topics that could change the way we do education in our local settings, I am so looking forward to interactions.”

**Philani Nyatsanza, Star Leadership Academy, Zimbabwe**

The eLearning Africa Primary & Secondary Education Virtual Exchange is an exciting new initiative, linking global EdTech and digital learning solution providers with decision makers in African primary and secondary education.

Whilst the traditional format of learning spaces has changed, students still need to be taught, engaged with, equipped and prepared for the future. And, as technology leads the way, the demand for access to digital content, delivery and engagement tools is increasing rapidly.

The eLearning Africa Primary & Secondary Education Virtual Exchange puts people, ideas, practices and technologies together in a multi-faceted online forum. With peer-to-peer engagement, including opportunities to hear from solution providers about how their innovative solutions and designs enable educators and learners to thrive, eLearning Africa Virtual Exchange is a platform both for sharing best practice and showing how EdTech is responding to the needs of African students and teachers.

Featuring Edtech which serves both students’

and teachers’ needs, it provides solutions and ideas to ensure students keep learning and teachers keep teaching, even in the most challenging circumstances. And it showcases solutions to enhance learning and ensure quality education.

This event highlights the various kinds of initiatives and tools that are available to enable teachers to continue to deliver education and engage with their students, allowing both practitioners and policy makers to share challenges they have encountered and good practices they have introduced.

The eLearning Africa Virtual Exchanges offer a cost-effective opportunity to engage with decision makers in the African education sector. In a region and a sector where personal relationships are so crucial, connections made at our exchanges prove their value time and time again.

They allow you to maintain market visibility and a close co-operation with African decision makers in primary and secondary education at a time when travel is challenging.

eLearning Africa is much more than just a conference and an exhibition. It is also a network of experts throughout Africa and the world, who are involved in finding sustainable education and training solutions by seizing the opportunity that technology offers to expand the reach of education.

“In its seventeen years of existence, eLearning Africa has made a real contribution to the expansion of education, training and skills

development across Africa,” says Rebecca Stromeyer, Founder of eLearning Africa. “Our network of experts from all over the world is unique and it is full of people who are helping to transform the prospects of Africans. At the eLearning Africa conferences, when people from all over the world get together, ideas are exchanged, partnerships are created and friendships are forged. It is a very special event.”
